SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Sir:

Pursuant to 37 C.F.R. §§ 1.56, 1.97 and 1.98, Applicant hereby submits an Information Disclosure Statement for consideration by the Examiner.

I. LIST OF PATENTS, PUBLICATIONS, AND OTHER INFORMATION

The patents, publications and other information requested to be considered by the Office (except unpublished U.S. patent applications) are listed on Form 1449 attached hereto.

II. COPIES

A. ☐ Submitted herewith is a legible copy of (i) each U.S. patent application publication and U.S. and foreign patent; (ii) each publication or that portion which caused it to be listed; (iii) for each cited pending U.S. application, the application specification including the claims, and any drawing of the application which caused it to be listed including the claims directed to that portion; and (iv) all other information or that portion which caused it to be listed.

B. ☒ Any patents, publications or other information which are listed on Form 1449 or on the copies of PTO-892, but which are not enclosed herewith, were

previously cited by or submitted to the PTO in one of the following applications which has been relied upon for an earlier filing date under 35 U.S.C. § 120:

U.S. Serial Number
10/972,964

U.S. Filing Date
10/22/04

C. ☒ Because the present application was/is being filed after June 30, 2003, no copies of the U.S. patents or U.S. patent application publications which are listed on the attached Form 1449 are enclosed pursuant to the waiver of 37 C.F.R. § 1.98(a)(2)(i). Any foreign patent documents or non-patent literature listed on the attached Form 1449 are enclosed herewith.

D. ☐ This is a PCT application in the entry of the National Phase in the United States. A copy of the International Search Report is attached for the Examiner's information. The documents listed on the International Search Report are listed on the attached Form 1449 for consideration by the Examiner and for listing on any patent resulting from this application. Since the International Search report was from the US, EPO, or JPO search authorities, copies of these references should have been supplied to the USPTO under the trilateral agreement and are believed to be in the file of the above-identified application. (MPEP 1893.03(g).)

III. CONCISE EXPLANATION OF THE RELEVANCE (check at least one box)

A. ☐ Except as may be indicated below in (B), all of the patents, publications or other information are in the English language (concise explanation not required).

B. ☒ A concise explanation of the relevance of each patent, publication or other information listed that is not in the English language is as follows (see 37 C.F.R. § 1.98(a)(3)):

1. ☐ See the attached foreign patent office communication from a counterpart foreign application:

2. ☒ English abstracts are provided as indicated on the attached PTO 1449 Form.

3. ☒ Other: A brief summary of the following documents that are not in English and for which English translations or English abstracts are not provided are as follows:

German Patent Application DE 25 19 509 (Portescap) which was filed on May 2, 1975 (claiming priority of CH 6172-74 of May 7, 1974), and which was published on November 20, 1975, describes in general a method and a device for controlling a small electric motor, for example electric motors for clocks and step motors. A permanent magnet DC motor is coupled to a DC power supply. The motor M is connected in parallel to a brake transistor T2. Further, the operation of the motor M (for example a step motor) is controlled by means of transistor T1. Pulses are supplied to the control circuit via terminal I. When the pulse is high, transistor T3 is conductive, and therefore, also transistor T1 is conductive to allow a collector current flowing through motor M. At the same time, capacitor C is charged via resistor R1. When the pulse at terminal I is low, transistors T3 and T1 are non-conductive. However, at the end of a high control pulse, transistor T4 is conductive and the energy stored in capacitor C flows via T4, R2 and T2, i.e., transistor T2 is conductive and forms a path of low resistance (brake circuit).

German Patent Specification DD 234 254 AI (Kombinat VEB Lokomotivbau-Elektrotechnische Werke "Hans Beimler") which was filed on January 29, 1985, and which was published on March 26, 1986, describes in general a circuit arrangement for braking electric DC motors used in trains, for example. The motor circuit comprises a main thyristor 1 controlled by pulse generator 11 and a brake thyristor 3 controlled by pulse generator 13.

Austrian Patent Specification AT 391 384 B (Toriser, Walter Gottlieb) which was filed on November 2, 1987, and which was published on September 25, 1990, discloses an electric machine for driving a bicycle which electric machine comprises a brake circuit as shown in Figure 1. The brake circuit comprises a power switch 9' controlled by control unit 10' by means of pulse width modulation.

C. ☐ The following additional information is provided for the Examiner's consideration.

IV. **CROSS REFERENCE TO RELATED APPLICATION(S)**

A. ☒ The Examiner is advised that the following co-pending application(s) contain(s) subject matter that may be related to the present application. By bringing this(these) application(s) to the Examiner's attention, Applicant(s) does (do) not waive the confidentiality provisions of 35 U.S.C. § 122.
